TO WHOM IT CONCERNS:

Subject: The Lecithin Process

Our Manufacturers crush Soybeans and extract the Soybean Oil. The Soybeans we crush are US Origin only, but are not at this point designated as GMO or GMO Negative.

The Soybean Oil is monitored by Running a Flash Test.

The Crude Oil is then degummed with water and centrifuging.

The centrifuge removes the heavy gums (Lecithin).

The gums are then run through a dryer to produce Lecithin.

Sincerely,

NATIONAL LECITHIN, INC.

Patricia Bruno
President
